---

PROFESSIONAL SUMMARY

Junior Full-Stack Developer specializing in the **MERN stack**, with hands-on experience building scalable web applications using **React.js, Node.js, Express.js, MongoDB, REST APIs, JWT authentication, role-based access control, and modern frontend architectures**.

Experienced in developing complete applications across e-commerce, expense management, real estate, healthcare, fitness, education, and employee management domains. Strong understanding of backend architecture, database design, authentication/authorization, API development, Git/GitHub, and application deployment fundamentals.

Secondary experience with **Laravel, PHP, MySQL, Blade, and Spatie Permission**, complemented by working knowledge of **Linux, Docker, and containerized application environments**.

PROFESSIONAL SUMMARY

Eden Spell technologies: Laravel + Mern Stack Internship at **Eden Spell Technologies [** June 2025-August 2025**]**

Eden Spell technologies: Junior full Stack / Mern Stack Eden Spell Technologies [August 2025- till today**]**

TECHNICAL SKILLS

Primary — MERN Stack

- **Frontend:** React.js, JavaScript (ES6+), HTML5, CSS3, React Router, Redux toolkit, Context API, Bootstrap , Tailwind css and other UI libraries
- **Backend:** Node.js, Express.js, RESTful APIs
- **Database:** MongoDB, Mongoose, MySQL , Sequelize
- **Authentication:** JWT, Refresh Tokens, bcrypt, Cookie-based Authentication
- **API Development:** REST APIs, Middleware, Validation, Error Handling
- **State Management:** Redux, Context API

Secondary — Laravel

- PHP, Laravel, Blade
- MySQL
- Laravel Authentication
- Laravel Socialite
- Spatie Permission
- Roles & Permissions
- Eloquent ORM
- MVC Architecture
- Migrations, Seeders & Relationships

DevOps / Tools

- Docker
- Linux
- Git & GitHub
- Postman
- VS Code
- npm
- Composer
- REST API Testing
- Environment Configuration

Additional Technologies

- Bootstrap
- Material UI
- Tailwind CSS
- Axios
- React Icons
- Stripe Integration
- Google Maps / Location-based Features
- JSON

PROJECTS

Multi-Vendor E-Commerce Platform — MERN

React.js | Node.js | Express.js | MongoDB | JWT | Stripe | Google Maps

- Developed a full-stack **multi-vendor e-commerce platform** with separate workflows for customers, vendors, administrators, and delivery personnel.
- Implemented authentication and authorization using **JWT, refresh tokens, protected routes, and role-based access control**.
- Built product, category, cart, order, checkout, and vendor management functionality.
- Integrated **Stripe payment processing** and webhook-based payment workflows.

- Developed **live order tracking and delivery management**, including a dedicated delivery-guy portal.
- Designed RESTful APIs using Express.js and structured backend logic using controllers, services, middleware, and database models.
- Implemented MongoDB schemas and relationships using Mongoose.
- Built responsive React interfaces with reusable components and centralized application state.

Split Expense Tracker — MERN

React.js | Node.js | Express.js | MongoDB | JWT

- Developed a collaborative expense management application for tracking and splitting expenses between users and groups.
- Implemented authentication, protected routes, refresh-token authentication, and user profile management.
- Designed group-based expense workflows for adding, managing, and calculating shared expenses.
- Built REST APIs with Express.js and MongoDB/Mongoose.
- Implemented modular backend architecture separating routes, controllers, services, middleware, helpers, and models.
- Developed a React frontend with reusable components and API-driven state management.

GitHub: https://github.com/aamishmalik-128/splitexpense-tracker-complete-app

---

Multi-Tier Real Estate Platform — MERN

React.js | Node.js | Express.js | MongoDB

- Built a real-estate platform supporting multiple levels of users and property management workflows.
- Developed REST APIs for property listings, users, authentication, and property-related operations.
- Implemented protected routes and authorization logic for different user roles.
- Designed MongoDB/Mongoose schemas for structured property and user data.
- Developed responsive React interfaces for browsing and managing properties.

GitHub: https://github.com/aamishmalik-128/multi_Tier-realEstate

---

Employee Management System — Laravel

Laravel | PHP | MySQL | Blade | Spatie Permission

- Developed a comprehensive employee management system with **role and permission management**.
- Implemented configurable roles and permissions using **Spatie Laravel Permission**.
- Built employee attendance management and team management functionality.
- Implemented payroll-related functionality including **payslips and online salary transfer workflows**.
- Developed authentication and authorization for administrators and employees.
- Built CRUD modules using Laravel MVC, Eloquent ORM, migrations, seeders, and Blade templates.
- Designed relational MySQL database structures for employees, teams, attendance, roles, permissions, and payroll-related data.

GitHub: https://github.com/aamishmalik-128/EmployeeManagementSystem

---

School Management CMS — Full Stack

React.js | Node.js | Express.js | MongoDB

- Developed a centralized **School Management CMS** for managing academic and administrative content.
- Implemented administrator-controlled management of students, teachers, classes, courses, announcements, and school content.
- Built authentication and role-based access for administrative users.
- Developed REST APIs for managing school data and CMS content.
- Designed MongoDB schemas and backend services for structured academic and administrative records.
- Created a responsive React-based administration interface for managing school operations and website content.

FitBroz — Fitness Web Application

React.js | Material UI | React Router | JavaScript

- Developed a modern fitness web application for discovering and exploring exercises.
- Built reusable React components including exercise cards, search/filter functionality, pagination, navigation, and exercise detail pages.
- Implemented client-side routing using React Router.
- Integrated an exercise dataset and designed a responsive user interface.
- Developed a modern dark-themed UI with responsive layouts for desktop and mobile devices.

GitHub: https://github.com/aamishmalik-128/FitBrozGymApp

Single-Vendor E-Commerce Application

React.js | Node.js | Express.js | MongoDB

- Built a complete e-commerce application with product browsing, authentication, shopping cart, and order workflows.
- Developed REST APIs using Node.js and Express.js.
- Implemented MongoDB/Mongoose data models and backend validation.
- Built reusable React components and frontend state management.
- Implemented protected user functionality and API-based communication using Axios.

---

CORE DEVELOPMENT EXPERIENCE

- Designing and developing **full-stack MERN applications from scratch**
- Building RESTful APIs with Node.js and Express.js
- Designing MongoDB databases and Mongoose schemas
- Implementing JWT authentication and refresh-token systems
- Developing role-based access control and protected APIs
- Building reusable React components and frontend architectures
- Integrating third-party APIs and payment services
- Implementing location and map-based functionality
- Working with webhooks and asynchronous backend workflows
- Managing projects using Git and GitHub
- Working with Linux environments and command-line tools
- Containerizing applications and services using Docker
- Developing Laravel applications using MVC, Eloquent, Blade, and MySQL

EDUCATION

Bachelor of Science in Software Engineering

[Foundation Univeristy] — Pakistan

[Fall 2021] – [June 2025]

CGPA: 3.64

Relevant Areas:

- Software Engineering
- Object-Oriented Programming

- Database Systems
- Web Development
- Data Structures & Algorithms
- Software Architecture

PROFESSIONAL STRENGTHS

- **Full-Stack Development:** Capable of taking an application from database design and API development to a complete React frontend.
- **Backend Engineering:** Strong focus on REST APIs, authentication, authorization, database architecture, and business logic.
- **Problem Solving:** Experienced in debugging complex frontend, backend, database, and Git-related issues.
- **Project Architecture:** Comfortable organizing applications into maintainable modules with separation of concerns.
- **Security Fundamentals:** Practical experience with JWT authentication, password hashing, protected routes, roles, and permissions.
- **Development Workflow:** Comfortable working with Git/GitHub, Linux, Docker, Postman, npm, and Composer.

LANGUAGES

- JavaScript
- PHP
- SQL
- C++
- Java
- Python

GITHUB & PORTFOLIO
